iphone 6 I am working on Nokia bb5 code usb sender app development.Can any one tell me that is it possible for me to send sms using a Nokia bb5 code usb sender. I just need to send sms from the Nokia bb5 code usb sender net to receive. can any one guide me on this? please reply as soon as possible A: You can use the SmsManager class to send sms. You can use the following code. SmsManager smsManager = SmsManager.getDefault(); smsManager.sendTextMessage(phoneNo, null, "sms message", null, null); This code will work if you've first download the application through the Market place. You can also write a receiver application to receive the sms and alert you. You can use the following code to receive sms messages. Uri receivedMessageURI = getIntent().getData(); String[] projection = { CommonDataKinds.Phone.NUMBER}; Cursor c = cr.query(receivedMessageURI, projection, null, null, null); if (c!= null) { while (c.moveToNext()) { int id = c.getInt(c.getColumnIndex(CommonDataKinds.Phone.NUMBER)); String message = c.getString(c.getColumnIndex(CommonDataKinds.Phone.MESSAGE)); String phoneNumber = c.getString(c.getColumnIndex(CommonDataKinds.Phone.NUMBER)); Log.i("Received SMS", phoneNumber + ":" + message); } } Ref: Q: How to use SQL SERVER and JDBC connectors with MyBatis M 82157476af
